
The Internet: A Tool for Financial Management

The Internet has become a round-the-clock source of financial products, services, and information. Electronic trading, or online investing, has become popular. As more investors explore the Internet for the purpose of personal financial management and investing, it is important to remember that it is just a tool. A working knowledge of basic personal finance, good decision-making skills, and an understanding of the potential risks are essential to investing, especially when investors enter cyberspace.

Investigate before you invest.

The Online Investor

Developments in technology allow investors to manage their finances online, at virtually any hour of the day or night. While online trading can be a “hands-on” learning experience for investors, it may not be appropriate for everyone. Whether you manage your investments on your own via the Internet or by working in person with a broker or investment adviser, it is essential that you know what types of securities you are purchasing, how they meet your investment goals, and the risks associated with each investment.

Online Trading and the Long-Term Investor

Investors also can trade securities online as part of a long-term investment plan. Some investors research securities and then place trades without any professional guidance. Other investors use the Internet to self-manage a few of their investments and then consult a broker or investment adviser for help in managing the rest of their portfolio.

Online Trading and the Short-Term Trader

Some investors use the Internet to trade frequently with the hope of profiting from a rapidly changing market. Although the possibility of quick profits may be alluring, this strategy is risky. Market volatility, inaccurate information about anticipated changes in stock prices, and delays in the execution of online trades may lead to financial losses.

Tips for Online Investors

The following tips were developed by the North American Securities Administrators Association, Inc. to educate investors and to help them think carefully about online investing.

Before beginning an online investment program, be sure to:

1. **Understand** that most likely you are not linked directly to the market through your home computer, and that the click of your mouse does not instantly execute trades or cancel orders.
2. Determine if the stock quotes and account updates you receive are **real-time or delayed**.
3. Check the on-line broker's ability to get the **best price** for investors. Most brokerage firms provide this information on their website.
4. Receive information from the firm to **substantiate any advertised claims** concerning the ease and speed of online trading.
5. Obtain information about **entering and canceling orders** (market, limit, and stop loss), and the details and risks of margin accounts (borrowing to buy stocks).

6. Get information from the firm about significant **website outages, delays, and other interruptions** that may affect your ability to execute trades. Make sure that the firm has an alternative way to execute trades.

7. Review the firm's **privacy and security policies**. Determine if your name will be used for mailing lists or other promotional activities by the firm or any other party.

8. **Receive clear information** about sales commissions, transaction fees, and conditions that apply to any advertised discount on commissions.

9. Know how to **contact a customer service representative** if problems occur. Request prompt attention and fair consideration. Be sure to keep good records to substantiate any problems that may occur.

10. Contact your **state securities regulator** to verify the registration status and disciplinary history (if any) of the online brokerage firm, or to file a complaint, if appropriate. You can find your state securities regulator's contact information by looking in the white pages of your telephone directory under “Government” or going to the NASAA website, www.nasaa.org, and clicking on “Find Regulator.”
